

# Skipjack Wind 2

## Building a cleaner, greener future for Maryland and Delaware – one rotation at a time

Ørsted has submitted a bid to the Maryland Public Service Commission to develop Skipjack Wind 2, a proposed project of up to 760 MW. The bid is in response to the Commission's call for proposals for Round 2 offshore wind projects, through which the Commission can award at least 1,200 MW of Offshore Wind Renewable Energy Credits.

### Fulfilling Maryland's offshore wind goal

Offshore wind creates an unprecedented opportunity for economic development in Maryland, as well as for improving air quality and securing the state's energy supply.

As the global leader in offshore wind development, with the largest portfolio of projects in development in the United States, Ørsted is uniquely positioned to support the State of Maryland in reaching its offshore wind goals. If awarded, the Skipjack Wind 2 project will generate 760 MW of clean energy delivering nearly two thirds of the state's target and powering more than 250,000 homes in the region.

### Greater ambition, greater benefits

Ørsted has been partnering with local businesses since 2017 to develop Maryland's first offshore wind project, Skipjack Wind 1, off the coast of the Delmarva Peninsula. With the proposal to develop Skipjack Wind 2, we're hoping to achieve even more together.

Skipjack Wind 2 will secure the region's central position in the new American offshore wind industry for decades to come – not only as a hub for new manufacturing and port facilities to serve this growing sector, but also as a training center for the new green workforce.

The benefits of the emerging offshore wind industry will be felt throughout Maryland and Delaware. As the global leader in offshore wind, Ørsted is uniquely positioned to serve as a trusted, long-term partner, creating quality jobs and new business opportunities, and investing millions of dollars in local communities.

## Skipjack Wind 2 at-a-glance

- Up-to 760MW
- Powering over 250,000 homes
- Improving air quality
- Supporting significant manufacturing operations
- Providing equitable opportunities
- Partnering with organized labor
- Preserving and restoring our coastal habitat and environment
